annodata
wider choice, better advice

Annodata is one of the UK's longest standing, independent providers of Managed Services, with 29 years' experience providing document solutions. In December 2016 we were acquired by Kyocera Corporation Japan.

We work closely with the Public Sector across the UK covering Local Authorities, the NHS and Housing & Property Management and offer a consultative approach to all customer engagements enabling us to consistently drive rapid ROI and process improvements across your organisation.

Amongst many others, we have provided solutions for:

- Aylesbury Vale District Council
- Oxfordshire County Council
- Hampshire NHS
- Aldwyck Housing Group

In each case, we worked in collaboration to provide a tailored print solution to meet their requirements and offer the best possible fit at all times.

Our Managed Services include print hardware and software solutions such as MobilePrint, AirPrint, Cloud Connect, NetAdmin and PaperCut to name but a few.

Network Device Management

KYOCERA Net Admin: unified device management software that uses a web-based platform to give network administrators easy and uncomplicated control to handle a fleet for up to 10,000 devices. Tasks that used to require multiple programs or walking to each printer can now be accomplished in a single, fast and modern environment. The device manager allows you to:

- organise devices into logical groups
- view their status at a glance
- set up automatic e-mail alerts
- upgrade Kyocera device firmware

Mobile & Cloud Solution

Kyocera Mobile Print: an application for your smartphone or your tablet computer. You do not need cloud connections but can automatically connect within a wireless LAN. With Mobile Print you can:

- Print photos, documents and web pages directly from the application
- Scanning directly from the MFP
- File documents in their own memory management (Android and Apple)Benefits
- No additional software management (eg. drivers) necessary, save costs with duplex printing
- Increase safety by using the built-in user registration

AirPrint™ is Apple technology that enables printing from iOS or OS X devices without installing any applications or drivers.

- No need to install any app on the Apple mobile device in order to print
- Print on-the-go in mobile environments
- Provides anytime, anywhere access to documents and information
- Requires no IT intervention
- Supports numerous AirPrint enabled apps

Cloud Print: print your documents directly from Google Docs or Google Apps on a PC, smartphone or tablet.

- Single sign-on: integrate existing user authentication with Cloud Print to provide single sign-on and seamlessly print documents via the Cloud.
- Document security: documents can be sent to print via the Cloud but will not release until the user signs into the device via user authentication.

Print Management Software

We offer a range of print management software including PaperCut which is widely used in the Public Sector and operates by importing users from your network directory, automatically discovers printer queues and starts tracking immediately. Install wizards help you define user access rights, page costs and quotas.

Print management software gives you full control over your fleet of devices:

- Control: account, bill or charge every copy, print and scan, allow staff recharge
- Manage: copiers, printers and users from a modem web interface
- Report: usage / costs by page, by user, department, device and function
- Access: device by PIN or MiFare card
- Enforce: responsible usage via applied rules, limits and auto notifications

Contact us today for a "no obligation" discussion with our dedicated Public Sector team and talk through how we can help you with your requirements and challenges.
