For more than 70 years Canon has been at the forefront of technology that has benefited the Public Sector.

Today, Canon has the broadest portfolio of imaging solutions, professional services and expert consultancy to suit the challenges faced by all government departments. Its innovative solutions increase efficiency across all types of citizen services and engagement, while improving the ease of collaboration, leading to better departmental outcomes.

We recognise that you do not have the luxury to build solutions from scratch, and that your legacy systems work against you by locking information away in silos. It makes data difficult to access

and use in a collaborative manner. While the use of technology in the UK is high, there remains

a significant number of citizens who lack access to digital services. But you still need to be responsive to their needs, while delivering services quickly and cost-effectively.

We are agile enough to scale and meet any crisis or seasonal demand, and bring innovative solutions into the heart of government. Canon have been a supplier to the Public Sector for many years, delivering national and localised programmes across the Cabinet Office, welfare, defence, healthcare, policing and education. We've done this by removing duplication and waste across your content, communications and print management processes. And by using IT to improve access to information, increase transparency and speed delivery to citizens.

Canon have a suite of solutions and services available through 6 Lots of this framework.

Dealing with citizen enquiries

Departments across government receive all manner of inbound forms, like passport and

benefit applications. Our Digital Mailroom captures this information regardless of volume or media and ensures it gets to the right department, reducing costs and speeding response times.

Complex version control

There can be no mistakes with ballot papers and examination papers, and our automated Specialist Document Management ensures the accuracy and security of the largest print runs, across multiple locations.

Personalised leaflets, posters and banners

Produce high quality, high volume Marketing Communications for print and digital. Our solution delivers secure access and production, archiving and end-to-end management, quickly delivering bespoke assets of all shapes and sizes.

Cutting edge technology

Our 3D Printing technology allows you to manufacture your own parts in the field, reducing downtime and costs whilst bringing agility and efficiencies. Our state-of-the-art print technologies allow for printing on almost any surface, allowing you to communicate with all types of audience.

Dealing with suppliers

The Canon Digital Mailroom takes the onus off the manual management of mail like supplier invoices by automating the process. Regardless of volumes, it's able to capture and validate mail and automatically route it to the appropriate user.

People and HR data

Process Automation is able to capture data from all sources and reduce the administrative workloads of your HR teams. There's no need to key in data, which improves accuracy and you have an audit trail of each record. HR teams will also be able to concentrate on core duties, rather than data entry and management.

Remanufacturing

The Public Sector will benefit from our environmentally friendly remanufactured multifunctional devices (MFDs) that are supplied with the same service plan as our standard machines, meaning no matter what the mix of devices is within your print infrastructure, they will experience the same high level of service throughout.
